

Part I: Foundations **9**

Chapter 1: The Role of Algorithms in Computing	10
Chapter 2: Getting Started	18
Chapter 3: Growth of Functions	39
Chapter 4: Recurrences	58
Chapter 5: Probabilistic Analysis and Randomized Algorithms	83

Part II: Sorting and Order Statistics **109**

Chapter 6: Heapsort	112
Chapter 7: Quicksort	127
Chapter 8: Sorting in Linear Time	144
Chapter 9: Medians and Order Statistics	160

Part III: Data Structures **172**

Chapter 10: Elementary Data Structures	174
Chapter 11: Hash Tables	192
Chapter 12: Binary Search Trees	220
Chapter 13: Red-Black Trees	238
Chapter 14: Augmenting Data Structures	261

Part IV: Advanced Design and Analysis Techniques **276**

Chapter 15: Dynamic Programming	277
Chapter 16: Greedy Algorithms	317
Chapter 17: Amortized Analysis	347

Part V: Advanced Data Structures **369**

Chapter 18: B-Trees	371
Chapter 19: Binomial Heaps	388
Chapter 20: Fibonacci Heaps	405
Chapter 21: Data Structures for Disjoint Sets	423

Part VI: Graph Algorithms **444**

Chapter 22: Elementary Graph Algorithms	445
Chapter 23: Minimum Spanning Trees	475
Chapter 24: Single-Source Shortest Paths	491
Chapter 25: All-Pairs Shortest Paths	527
Chapter 26: Maximum Flow	547

Part VII: Selected Topics **598**

Chapter 27: Sorting Networks	600
Chapter 28: Matrix Operations	632
Chapter 29: Linear Programming	674
Chapter 30: Polynomials and the FFT	720
Chapter 31: Number-Theoretic Algorithms	736
Chapter 32: String Matching	790
Chapter 33: Computational Geometry	813
Chapter 34: NP-Completeness	840
Chapter 35: Approximation Algorithms	890

Part VIII: Appendix: Mathematical Background **919**

Appendix A: Summations	920
Appendix B: Sets, Etc.	931
Appendix C: Counting and Probability	952
