**This is my web Page in HTML.**

## **HTML(Hypertext Markup Language)**

### **Basics of HTML**

Web pages or material in form of hypermedia documents accessed through the internet can be located anywhere in the world.

Html is used to define documents structured and format with the help of single tag or a pair of tags.

### **How to create an HTML Document ?**

An HTML document can be created using any html editor or text editor like Notepad, Notepad++ etc.
